Office Action Summary

Application No.

10/613,852

Applicant(s)

WANG, CHENGBAO

Examiner

William P. Neuder

Art Unit

3672

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1,2,4-10 and 12-17 is/are rejected.
- 7) ☒ Claim(s) 3 and 11 is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 17 is rejected under 35 U.S.C. 102(b) as being anticipated by Thomas et al EP 0322958.

Thomas et al a submersible pumping system for pumping wellbore fluid. A motor 11, a pump assembly 10 connected to the motor and a shroud 20 connected to the pump assembly are provided. The shroud has a connection end (figure 2A) and an intake end (figure 2B). As seen in figure 1, the shroud encompasses the motor. A sealing ring (unnumbered) seen in figures 2A and 4 prevents wellbore fluid from entering the shroud at the connection end.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1,2,4-10 and 12-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thomas et al (EP 0322958) in view of Welford et al 4,342,538 or Vesey et al 5,551,708.

Thomas et al a submersible pumping system for pumping wellbore fluid. A motor 11, a pump assembly 10 connected to the motor and a shroud 20 connected to the pump assembly are provided. The shroud has a connection end (figure 2A) and an intake end (figure 2B). As seen in figure 1, the shroud encompasses the motor. A sealing ring (unnumbered) seen in figures 2A and 4 prevents wellbore fluid from entering the shroud at the connection end. Thomas discloses all of the claimed features except for a retaining ring that holds the sealing ring in place. While it is considered probable that Thomas et al has some means for holding or fixing the shroud 20 with the sealing ring to the pump intake, both Welford et al and Vesey et al teach that it is known to attach shrouds to shafts with the use of sealing rings and retaining rings. It would have been considered obvious to provide Thomas et al with a retainer ring to hold the sealing ring and shroud in place as taught by either Welford et al or Vesey et al since some means of attaching the shroud to the pump shaft must be present and Welford

Art Unit: 3672

and Vesey teach that retaining means to attach shrouds with sealing rings to shafts is one known way of attachment. As to claims 2 and 10, figure 2A shows the shroud attached to the pump intake. As to claims 4 and 12, the unnumbered sealing ring is an elastomer as shown by the cross-hatching. As to claims 5 and 13, the pump 10 is located above the motor and draws the wellbore fluid past the motor. As to claims 6 and 14, the shroud extends below the motor assembly. As to claims 7 and 15, since the sealing ring and shroud are attached to the pump assembly, so would the retaining ring. As to claims 8 and 16, while Thomas et al does not specifically disclose the shroud being formed from sheet metal, the cross-hatching discloses metal and the use of sheet metal to form pump shrouds is common, it is believed that the shroud of Thomas et al is sheet metal.

Allowable Subject Matter

Claims 3 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Neuder whose telephone number is 571-272-7032. The examiner can normally be reached on Tuesday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David J. Bagnell can be reached on 571-272-6999. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
